

Imagin's HotRod Deluxe Camera System

The HotRod Deluxe camera system, recognized for providing the highest-quality images, is available with one or two camera detachable handpiece configurations, a multi-stage light control that allows you to dim or brighten the light source and a technology port that accepts an optional plug-in 12-frame memory cartridge. They are also portable by moving them to low cost wall mounted docking stations in each operator. Deluxe console docking stations have a video and S-video output and can integrate with an analog and/or computer network.

- Imagin's HotRod intraoral camera handpiece features Proprietary High-Resolution Optics that exceed 200 line pairs per millimeter with less than 2% distortion, providing "crystal clear" clarity. The HotRod handpiece has a very user-friendly "single-handed" focus control slider with four fixed positions that provides a focus range from 0 mm to full face and a 72-degree field of view. Each position allows a broad range of focus and provides you more in and out movement with a greater depth of field. The handpiece has the sleekest head in the industry and is known best for access throughout the mouth, especially for viewing behind the rear molars. The lens window is built flush with the camera body allowing protective sleeves to slide perfectly flat over the head, keeping it free from distortion with no loss of clarity due to window gaps. The handpiece has the only thermally activated Anti-fog lens tip on the market, a three-button key-pad located on the handpiece to control image capture and a revolutionary ergonomic design that is strong, lightweight, comfortable, and easy to operate.
- Imagin's high-resolution adjustable extraoral camera handpiece features an easy to use adjustable iris with a fiber optic light for controlling the brightness of your images in various lighting conditions. It also features an adjustable focus range from 0 mm to infinity for superb clarity and ease of use when taking full face, smile, and full arch images. The extraoral handpiece was created in response to dentists asking for an extraoral lens that is easier and faster to use than a digital camera, yet still able to produce sharp 35 mm type images that can be used for case presentations and cosmetic imaging.

Part #: 98-2270, HotRod 90-deg Intraoral Camera (\$3,295)
